Problem Statement

A payment issue with delivery partners has raised financial concerns, leading the finance team to suspend payments due to suspected overpayment. Your role is to analyze payment data, verifying claims of overpayment, identifying the underlying reasons, and proposing solutions that address the concerns of both the operations and finance teams. Our primary objective is to, **"Rectify payment discrepancies, ensure equitable compensation for our partners, and foster improved collaboration between teams and vendors to enhance sustained operational effectiveness."**

Approach:

Findings:

It is clear after the analysis that some business partners are overpaid whereas many are underpaid.

Criteria to calculate where partners are overpaid/underpaid-

We have first calculate profit percent for each partner:

Partners with profit percent < 0 : Underpaid

Partners making profit less than 25%: Normal

Partners with profit percent $\geq 25\%$: Overpaid

Result of Analysis:

18 business partners are underpaid

18 business partners make profit less than 25%

15 business partners are over paid

Suggestions:

Company should ensure equitable compensation for partners and foster improved collaboration between teams and vendors to enhance sustained operational effectiveness.
